### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2 and 4-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted prior art (hereinafter APA') in view of Manning (US 6,364,685).

APA' discloses a basis modular telephone plug [60, figure 6] comprising:

- elongated housing [61];
- a connector module mounted in the housing [figure 6];
- a flexible engaging tab [62] detachably mounted on a bottom of the housing, a gap is

provided between the tab and the bottom of the housing;

- a stationary end fastened on one end of the bottom of the housing by a coupling device;

and

- the coupling device comprises two holes and two stubs [figure 6].

APA' discloses the instant claimed invention as described above except for the tab comprising a free end having a loop abutting slidably on the bottom of the housing and two

detents, and the housing having a passage defining between two wings.

Manning discloses a plug connector [20, figures 2a, 2b] comprising a latch having a fixed end and a free end [25], wherein the free end having a loop abutting slidably on a bottom of the housing and two detents [13a], and the housing having a passage defining between two wings [not labeled].

It would have been obvious to one having ordinary skill in the art at the time invention was made to modify the plug of APA' to provide the latch design and the wings formed in the housing as taught by Manning for the purpose of facilitating connection between the plug and a mating jack connector, as is well known in the art of the electrical connectors.

#### *Allowable Subject Matter*

3. Claims 3 and 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record does not teach or render obvious the combination, cooperation and interaction that applicant claimed a modular telephone plug comprising a housing having two wings includes two grooves formed therein to receive two protrusions formed in the engaging tab, as recited with other elements in the claim 1.
